**ABSTRACT**

The invention involves a focusing flashlight, the flashlight includes the tail cover, housing body, and a reflector and a bulb holder installed in the housing body. Therein, the reflector and the bulb holder are connected to each other by the ~~thread~~ threads in order to adjust the position of the bulb. Between the reflector and the bulb holder, there is installed a lock device to fix the relative position of the reflector and the bulb holder. The focusing flashlight has a lot of advantages, for example, the focusing performance being reliable, the focusing performance after focusing being ~~not-affected~~ unaffected by the rotation of the front cover and the housing head, the structure being simple, ~~operation being~~ and convenience, convenient. ~~and so on.~~
